

Development and Culture

Introduction to Planetary Health

as taught at

Hiroshima University
Graduate School of Humanities and Social Sciences

Autumn/Winter 2025

Room: IDEC 203

Intensive Course

Instructor: Dr. Gergely Mohácsi (Osaka University, School of Human Sciences)

Email: mohacska49@gmail.com

Office Hours: Monday, 16:00 - 17:00 (upon request), Zoom

Course Objective

The aim of this course is to develop an academic interest in how humans have altered social-ecological systems on a planetary scale, often called Anthropocene, and the consequences of such transformation for health, disease and well-being. Lectures will explore the complex interactions between the changing environment, forms of disease and the healthcare system by introducing students to major theme in the interdisciplinary field of planetary health, such as emerging infectious diseases, food waste or chemical pollution. In addition, key concepts and methods in medical anthropology will be introduced to help students understand and interpret the changing relationship between health, disease and the environment in the 21st century. At the one-day off-campus field trip, participants will explore planetary health issues together in practice. In the subsequent seminars, participants will take a leading role in reviewing case studies from around the world through intensive group discussions. The course will be complemented by a mini workshop to discuss and wrap-up the topics covered during the four days.

Course Format

Lecture & seminar including discussions, student presentations and group work

Learning Goals

By the end of this course students should:

- (1) be familiar with medical anthropology as a distinctive discipline at the crossroads of the social, human and medical sciences
- (2) build up a solid knowledge of the broad nature, concepts and theories of planetary health
- (3) be able to apply key theoretical approaches to explain the environmental factors of disease, particularly the recursive interaction of epidemiological and ecological drivers
- (4) develop an academic interest in how humans have been altering the relationship between the environment and their health
- (5) develop an interest in further comprehension of grassroots activism around planetary health
- (6) be able to participate in collaborative work such as class discussion and group presentation assignments

Keywords

planetary health; Anthropocene; medical anthropology; disease; zoonosis, science and technology studies, resilience

Course Calendar

The course will consist of lectures, group discussions, case studies and practical exercises. For *Day 1 and Day 3*, everyone is required to read one chapter from the *textbook* before each class to prepare for class discussion. *Day 2* will be devoted to a field trip at the Iniabi Farm, where you will explore the themes discussed in class through direct experience. For *Day 3 and 4*, everyone will be assigned a case study from the *anthology*. You will be required to present a summary that outlines the main points and interrogates some of the key issues of this case study and lead a discussion inspired by that text. On *Day 4*, these individual presentations will be followed by a roundtable discussion with other students to wrap up key concepts from the course and engage in critical reflection on them.

Daily Schedule

Each "class" will be divided into three "sessions" conducted over half a day.

Session 1	09:00~09:50		Session 4	13:30~14:20
Session 2	10:00~10:50	(Lunch)	Session 5	14:30~15:20
Session 3	11:00~11:50 +		Session 6	15:30~16:20 +

DAY 1, Nov 2 | FOUNDATIONS

Orientation: About the class

#1 Introduction: What is planetary health?

*Required reading: M&F Ch.1 "An Introduction to Planetary Health" (pp.3-16)

Recommended readings:

- Farman, Abou and Richard Rottenburg. 2019. Measures of future health, from the nonhuman to the planetary. An introductory essay. *Medicine Anthropology Theory* 6(3): 1–28. doi: 10.17157/mat.6.3.659
- Whitmee S, Haines A, Beyrer C, et al. 2015. Safeguarding human health in the Anthropocene epoch: Report of the Rockefeller Foundation–Lancet Commission on planetary health. *Lancet* 386(10007):1973-2028.
- Watanabe, Toru and Watanabe Chiho. 2019. Ecohealth and human ecology as underlying theoretical background. In *Health in Ecological Perspectives in the Anthropocene*. Watanabe Toru and Watanabe Chiho eds., pp.1–12. Springer.

#2 Ecologies of health and disease

*Required readings: M&F Ch.3 "Population, Consumption, Equity, and Rights" (pp.37-70); Ch.4 "A Changing Planet" (pp.71-110)

Recommended readings:

- Yates-Doerr, Emily and Kenneth Maes. 2019. Global health. In *Cambridge Encyclopedia of Anthropology*. Cambridge: University of Cambridge. <https://doi.org/10.29164/19ghealth>
- McElroy, Ann and Patricia K. Townsend. 2015. The ecology of health and disease (Chapter 1). In *Medical Anthropology in Ecological Perspective*. Sixth edition., pp. 1–32. Boulder, Oxford: Westview Press.
- Steffen W, Broadgate W, Deutsch L, Gaffney O, Ludwig C. 2015. The trajectory of the Anthropocene: The Great Acceleration. *The Anthropocene Review* 2(1): 81–98.

#3 Biodiversity and nutrition

*Required reading: M&F Ch.5 "Food and Nutrition on a Rapidly Changing Planet" (pp.113-140)

Recommended readings:

- Cuj, Miguel, Lisa Grabinsky and Emily Yates-Doerr. 2021. Cultures of nutrition: Classification, food policy, and health. *Medical Anthropology* 40(1):79–97.
- McElroy, Ann and Patricia K. Townsend. 2015. The ecology and economics of nutrition (Chapter 5). In *Medical Anthropology in Ecological Perspective*. Sixth edition., pp. 169–216. Boulder, Oxford: Westview Press.
- Willett, Walter, Johan Rockström and Brent Loken, et al. 2019 Food in the Anthropocene: The EAT-Lancet Commission on healthy diets from sustainable food systems. *Lancet* 393 (10170):447–492.

Class Discussion

#4: Zoonosis: Animal farming and pandemics

*Required reading: M&F Ch.6 "Planetary Health and Infectious Disease" (pp.141-164)

Recommended readings:

- Brown, Hannah and Alex M. Nading. 2019. Introduction: human animal health in medical anthropology. *Medical Anthropology Quarterly* 33(1): 5–23. doi: <https://doi.org/10.1111/maq.12488>
- Sandhu, Harman, Anish Arora, Saadia Sarker, Bindra Shah, Anusha Sivendra, Emily Winsor, and Anahat Luthra. 2021. Pandemic prevention and unsustainable animal-based consumption. *Bulletin of the World Health Organization* 99(8): 603–605. doi:10.2471/blt.20.276238.
- Rock, Melanie and Chris Degeling. 2016. Toward "One Health" Promotion. In *A Companion to the Anthropology of Environmental Health*. Merrill Singer ed., pp. 68-82. San Francisco, CA: WileyBlackwell.

DAY 2, Nov 3 FIELD TRIP

1-day field trip to the *Iniabi Farm*

👉 for more details see: <https://iniabifarm.info/en/>

#5: Field trip 1: What is "natural" farming?

#6: Field trip 2: Observing "natural" farming

#7: Field trip 3: Doing "natural" farming

#8: Field trip 4: "Natural" farming for planetary health?

DAY 3, December 13 | CASE STUDIES

#9: Living on a toxic planet

*Required reading: M&F Ch .14 "Controlling Toxic Exposures" (pp.359-386)

Recommended readings:

- Langwick, Stacey. 2018. A politics of habitability: Plants, healing and sovereignty in a toxic world. *Cultural Anthropology* 33(3): 415-443. doi: 10.14506/ca33.3.06
- Mohácsi, Gergely. 2021. Toxic remedies: On the cultivation of medicinal plants and urban ecologies. *East Asian Science, Technology and Society: An International Journal* 15(2):192–210, doi: 10.1080/18752160.2021.1897738
- Pathak, Gauri and Mark Nichter. 2019. The anthropology of plastics: An agenda for local studies of a global matter of concern. *Medical Anthropology Quarterly* 33(3): 307–326. doi: 10.1111/maq.12514

#10: Drug resistance

(film and discussion)

Resistance Fighters: The Global Antibiotics Crisis (dir. Michael Wech, 2019)

*Required reading: Duff et al. eds. 2020. Chapter 04 Going Circular" (pp.176-219)

Recommended readings:

- Harper, Kristin N., Gabriela M. Sheets, George J. Armelagos. 2016. Modifying our microbial environment: From the advent of agriculture to the age of antibiotic resistance. In *A Companion to the Anthropology of Environmental Health*. Merrill Singer, ed., pp. 373–395. San Francisco, CA: WileyBlackwell.
- Landecker, Hannah. 2016. Antibiotic resistance and the biology of history. *Body & Society* 22(4): 19–52.
- Tang, Karen L., Niamh P. Caffrey, Diego B. Nóbrega. 2017. Restricting the use of antibiotics in food-producing animals and its associations with antibiotic resistance in food-producing animals and human beings: a systematic review and meta-analysis. *Lancet Planetary Health* 1:316–327.

Class Discussion

#11: Presentations 1–Haze and asthma

*Assigned readings: Duff et al. eds. 2020

- Chapter 01 "Health and Haze" (pp.32-81)
- Chapter 03 "Medical Clinics for Planetary Health" (pp.130-175)
- Chapter 08 "Family Planning for People and Planet" (pp. 314–359)

#12: Presentations 2–Food system and local change

*Assigned readings: Duff et al. eds. 2020

- Chapter 05 "Putting Food Needs First" (pp.220-267)
- Chapter 07 "Today's Solutions for the Future of Food" (pp.314-359)
- Chapter 09 "Coastal Conservation Takes Root" (pp. 408–465)

Class Discussion

DAY 4, December 14 | WRAP-UP**#13: Presentations 3–Conservation and health promotion**

*Assigned readings: Duff et al. eds. 2020

- Chapter 02 “Dams and Disease” (pp.82-129)
- Chapter 04 “Going Circular” (pp.176-219)
- Chapter 06 “Typhoid and Torrents” (pp.268-313)

#14: Mini workshop**#15: Wrap-up****Independent Study Outside of Class**

Participants of this course will be required to read c.20-30 pages from the textbook and of other sources before each class. In addition, each student will be in charge of presenting one case study for which they should read the assigned chapter (c. 50 pages) and prepare a handout until the day of the presentation.

Assignments

First and foremost, (A) *an engaged and thoughtful participation* in class discussion and the field trip is central. In the first half of the course, students should come to class having read and understood the required chapter in the textbook. To prepare for the class discussions, you will need to take notes on the main themes of each chapter and think about how these points relate to topics covered in classroom sessions and the field trip. In addition, each participant will be asked to present (B) *a summary of a case study* from the anthology and lead a discussion inspired by that text. The presentation should outline the main points and interrogate some of the key issues of the case study (c. 4 pages handout, 15 minutes presentation). On the last day of the course, students will participate in a roundtable discussion with their peers designed to reflect on the key themes covered throughout the course.

Grading and Evaluation

Grading is based on the classwork, active participation in discussion, and the evaluation of midterm presentation. Attendance at 80% of all classes (12<) is required.

A: Class exercises & participation.....	50%
B: Mid-term individual presentation (case study).....	50%

Further Remarks on Class Conduct

1 Textbook. It is recommended that you download and/or purchase the textbook and the anthology (see in “Required and assigned readings” section), which will help you in following the reading requirements and preparing for the workshop at the end of the term. A limited number of the textbooks will be available on reserve.

2 Language. The language of the course is English, as well as all reading assignments.

3 Plagiarism. Plagiarism of any sort, including the use of online content, is not allowed. If you are not sure about what is or is not considered plagiarism, consult the instructor.

4 Completion of writing assignments. All writing assignments must be uploaded to the Dropbox folder before the due date.

5 Class notes and audio-visual materials. Instruction in this class is augmented with a variety of complementary materials, such as video excerpts, slideshows or direct quotes from primary sources. *Students are responsible for taking notes on these materials and incorporating them into their papers.*

6 Missed fieldwork and/or presentation. There will be no make-up exam without adequate documentation (such as a doctor's or counseling certificate).

Course readings

Required and assigned readings

- Myers, Samuel and Howard Frumkin, eds. 2020. *Planetary Health: Protecting Nature to Protect Ourselves*. Washington, DC: Island Press. (textbook, "M&F")
- Duff, Hilary, Carlos Faerron Guzmán, Amalia Almada, Christopher Golden and Samuel Myers eds. 2020. *Planetary Health Case Studies: An Anthology of Solutions*. Planetary Health Alliance. (anthology, "Duff et al. 2020")

Recommended readings

BOOKS

- McElroy, Ann and Patricia K. Townsend. 2015. *Medical Anthropology in Ecological Perspective*. Sixth edition. Boulder, Oxford: Westview Press.
- Nading, Alex M. 2025. *The Kidney and the Cane: Planetary Health and Plantation Labor in Nicaragua*. Durham, NC: Duke University Press.
- Singer, Merrill, ed. 2016. *A Companion to the Anthropology of Environmental Health*. San Francisco, CA: WileyBlackwell.
- Watanabe, Toru and Watanabe Chiho, eds. 2019. *Health in Ecological Perspectives in the Anthropocene*. Springer.
- Zywert, Katharine and Stephen Quilley, eds. 2020. *Health in the Anthropocene: Living Well on a Finite Planet*. Toronto: University of Toronto Press.
